

## Project 2 :

Build a page for a sports pool scheme. It will be used to store and retrieve FIFA world cup's user forecasts.

At the beginning, the page is blank. Thanks to the « reset » button, users are allowed to fill all groups with the official group draw. Once, their own forecasts done, they could be stored and retrieved.

## Visual design prototype

This is an example. Look&feel must be the figment of your imagination.

## 1 : Groups

## 5 : Users

Users are identified by an email address and a password.

« save » button records data in a specific local file.

« Load » button retrieve corresponding user's forecasts.

« reset » button reset the page and retrieve the initial and official group draw data.

Find a fast and simple solution to build this data according to the technical specifications given further.

Ps : « OPEN TIL » input field does not be implemented at the moment.

## Technical specifications

HTML 5, CSS 3, Javascript, JQUERY Framework (latest release).

Regardless the standard chosen for saving data, webservice, indexedDB, text file, and so on, data must be structured in a JSON flow.

## Web services
